

Gel Fuel

Formulated in accordance with the stringent controls and requirements for international export and use. It's standard of consistency enables the product to compete internationally with the world's leading brands and is presently the most commonly exported product. The fuel's content assures maximum burn output and a blue flame that emits no smoke, is odorless, and does not create a soot residue. This high viscosity easy-to-handle gel assures no spillage, and is packed in recyclable tin containers that are more sturdy and resistant to dents and shocks. A variety of refillable tin container sizes is available to suit all operational requirements.

Packing Options

Gel and liquid fuel are packed in various container sizes to suit a majority of catering needs. Custom-sized containers are also available against large volume orders. Our standard containers are available in the following sizes:

Gel Fuel

200g

4kg

1liter

Wick Fuel

260g

170g
