

## Ironing machine with Folder PHOENIX

Belt and roller auto-drying ironing machine with built-in lengthwise folding and crossfolding. It is the only machine that feeds, irons, folds, crossfolds and stacks flatwork measuring between 900 mm and 3,200 mm with just one operator in attendance. It works on 1 or 2 independent lanes, making 1 or 2 lengthfolds and up to 3 crossfolds. Moreover, the partial bypass accessory can be fitted to give you the option of ironing items just on one lane and ironing them and simultaneously folding them on the other; alternatively, one or more SMARTY folders for small items can be applied downstream from the ironing machine. Items that do not require ironing can be fed out of the front or rear onto a collection table. Programming is done via a PLC microprocessor. Comes with a choice of roller ø 600, 800 mm and net ironing width 2600, 3200 mm. Electric, gas or steam heating available on all models. The version with gas heating is EU approved..

Works On 1 or 2 independent lanes

1 Lane : 1-2 lengthfolds 1-2-3 crossfolds
